PROFILE

Engineering student at INPT Rabat, ranked 4th/38 in the first year and 1st/39 in semester S3, specializing in cybersecurity with a strong interest in applied artificial intelligence. I build solutions combining machine learning, generative AI, and security for anomaly detection, automation, and decision support. Rigorous and research-oriented, I aim to deepen my expertise in AI at the intersection of systems, cybersecurity, and smart infrastructures.

EDUCATION

Engineering Cycle — Cybersecurity 2024 – present

INPT — National Institute of Posts and Telecommunications, Rabat

Preparatory Classes (CPGE) — Mathematics & Physics 2022 – 2024

Lycée d'Excellence Moulay Youssef, Rabat

Baccalaureate in Mathematical Sciences 2022

Lycée Scientifique, Témara

PROFESSIONAL EXPERIENCE

Researcher — Collaboration with PhD Students INPT · 2025/2026 – present

- Research on **Fairness-Aware Federated Unlearning for IoT Networks**.
- Study of selective unlearning mechanisms in a federated learning framework, with fairness constraints between IoT nodes.
- Active collaboration with INPT PhD students on privacy and robustness of distributed models.

Workshop Contributor — Taxi-Drone Project

INTELLCAP · Feb. 2026 – present

- Obstacle detection and avoidance for autonomous drones using **Computer Vision** and **YOLO**.
- Development of ML/AI models in Python ensuring **functional safety** of the system.

PROJECTS

Ransomware Detection via Generative AI Python, GANs, VAEs, CTGAN

- Training ML/DL models on data augmented by GANs and VAEs for ransomware detection.
- 94% accuracy** on 100,000 CTGAN samples, with notable improvement on minority classes.

Local RAG System LangChain, ChromaDB, FastAPI, Streamlit, Ollama

- RAG** system for querying PDF documents, combining embeddings, vector search and context-assisted generation.
- Conversational memory** and source attribution for traceable answers via an interactive web interface.

TECHNICAL SKILLS

Programming Languages

Python Java R SQL Bash

Mathematics

Probability Statistics
Linear Algebra Optimization
Number Theory Arithmetic

Artificial Intelligence & ML

Machine Learning Deep Learning
Computer Vision YOLO Pandas
Numpy Scikit-learn PyTorch TensorFlow

Cybersecurity

Kali Linux Metasploit Wireshark
Pen Testing Ethical Hacking Cryptography

Networking & Tools

TCP/IP Linux GNS3
Docker Git VS Code
VirtualBox VMware

CERTIFICATIONS

- Kaggle** — Machine Learning
- Kaggle** — Computer Vision
- Oracle** — Generative AI (in progress)
- Huawei** — HCIA Datacom
- HP** — Security Awareness
- Cybrary** — Linux File System
